SUBJECT INDEX

Accuracy, effect of image aliasing on image alignment to subpixel, 58
Adaptive hybrid coding of images, 233
Aerial photographs, environmental change detection in digitally registered, 26
Algorithms using an array processor, speedup of radiographic inspection, 96
Aliasing on image alignment to subpixel accuracy, effect of image, 58
Alignment to subpixel accuracy, effect of image aliasing on image, 58
Aperture radar images, automatic change detection for synthetic, 125
Applications of digital processing in computed radiography, 210
Applications of programmable logic arrays to video rate image processing, 161
Approach for video image enhancement, heuristic, 48
Array processor with application to nerve fiber counting, imaging techniques implemented on pipeline minis and an, 194
Array processor, speedup of radiographic inspection algorithms using an, 96
Arrays to video rate image processing, applications of programmable logic, 161
Assembly, digital and optical methods of image differencing for track, 66
Automatic change detection for synthetic aperture radar images, 125

Bandwidth compression: its effect on observer performance, 278
Beam conversion in CAT by rubber sheet transformation, fan-to-parallel-, 76
Blind deconvolution, new technique for, 119
Boundary-finding scheme and the problem of complex object localization in computed tomography images, 213
Bounded-error coding of cosine transformed images, 291

CAT by rubber sheet transformation, fan-to-parallel-beam conversion in, 76
(CT) scans, reduction of edge position uncertainty on computed tomographic, 222
Change detection in digitally registered aerial photographs, environmental, 26
Change detection for synthetic aperture radar images, automatic, 125
Code modulation (PCM) image coding, reduction of quantization noise in pulse, 314
Code modulation (WHT/DPCM) processing of intraframe color video, Walsh-Hadamard transform/differential pulse, 240
Coders with semi-definite and definite decoders, image, 299
Coding of cosine transformed images, bounded-error, 291
Coding of images, adaptive hybrid, 233
Coding, practical universal noiseless, 247
Coding, reduction of quantization noise in pulse code modulation (PCM) image, 314
Coincidence segmentation for medical images, global local edge, 181
Comparison of digital image filters and a hybrid smoother, 110
Complex object localization in computed tomography images, boundary-finding scheme and the problem of, 213
Compression: its effect on observer performance, bandwidth, 278
Compressor for facsimile images, dual-mode hybrid, 226
Compressor, video data processor (VIDAP): a real-time video data, 284
Computed radiography, applications of digital processing in, 210
Computed tomographic (CT) scans, reduction of edge position uncertainty on, 222
Computed tomography images, boundary-finding scheme and the problem of complex object localization in, 213
Computed tomography, multiple window display techniques in, 174
Computer-controlled video subtraction procedures for radiology, 203
Computer display techniques in nuclear medicine, precision, 176
Computer-generated holograms, iterative method applied to image reconstruction and to, 2
Color video signal, two-dimensional transforms of the sampled NTSC, 308
Color video, Walsh-Hadamard transform/differential pulse code modulation (WHT/DPCM) processing of intraframe, 240
Conditional replenishment using motion prediction, 268
Conversion in CAT by rubber sheet transformation, fan-to parallel-beam, 76

Correction, real-time digital image filtering and shading, 104
Cosine transformed images, bounded-error coding of, 291
Counting, imaging techniques implemented on pipeline minis and an array processor with application to nerve fiber, 194

Data compressor, video data processor (VIDAP): a real-time video, 284
Data handling recording system, 130
Data processor (VIDAP): a real-time video data compressor, video, 284
Decoders, image coders with semi-definite and definite, 299
Deconvolution, new technique for blind, 119
Definite decoders, image coders with semi-definite and, 299
Detection in digitally registered aerial photographs, environmental change, 26
Detection for synthetic aperture radar images, automatic change, 125
Differencing for track assembly, digital and optical methods of image, 66
Differential pulse code modulation (WHT/DPCM) processing of intraframe color video, Walsh-Hadamard transform/, 240
Digital image filtering and shading correction, real-time, 104
Digital image filters and a hybrid smoother, comparison of, 110
Digital image processing system, the LAE 980: a multipurpose, 146
Digital images, median masking technique for the enhancement of, 142
Digital and optical methods of image differencing for track assembly, 66
Digital processing in computed radiography, applications of, 210
Digital television parts measurement system, 167
Digitally registered aerial photographs, environmental change detection in, 26
Display techniques in computed tomography, multiple window, 174
Display techniques in nuclear medicine, precision computer, 176
Dimensionality reduction, linear regression formula for, 40
Dual-mode hybrid compressor for facsimile images, 226

Edge coincidence segmentation for medical images, global local, 181
Edge position uncertainty on computed tomographic (CT) scans, reduction of, 222
Effect of image aliasing on image alignment to subpixel accuracy, 58
Enhancement using 3 x 3 pixel neighborhood operator function, real-time image, 135
Enhancement of digital images, median masking technique for the, 142
Enhancement, heuristic approach for video image, 48
Environmental change detection in digitally registered aerial photographs, 26

Facsimile images, dual-mode hybrid compressor for, 226
Fan-to-parallel-beam conversion in CAT by rubber sheet transformation, 76
Fast median filter implementation, 154
Fiber counting, imaging techniques implemented on pipeline minis and an array processor with application to nerve, 194
Filter implementation, fast median, 154
Filtered images with Poisson noise, nonlinear restoration of, 84
Filtering and shading correction, real-time digital image, 104
Formula for dimensionality reduction, linear regression, 40
Functions, real-time image enhancement using 3 x 3 pixel neighborhood operator, 135

Global local edge coincidence segmentation for medical images, 181

Handling recording system, data, 130
Heuristic approach for video image enhancement, 48
Holograms, iterative method applied to image reconstruction and to computer-generated, 2
Hybrid coding of images, adaptive, 233
Hybrid compressor for facsimile images, dual-mode, 226
Hybrid smoother, comparison of digital image filters and a, 110

Image aliasing on image alignment to subpixel accuracy, effect of, 58
Image alignment to subpixel accuracy, effect of image aliasing on, 58
Image coders with semi-definite and definite decoders, 299
Image coding, reduction of quantization noise in pulse code modulation (PCM), 314
Image differencing for track assembly, digital and optical methods of, 66
Image enhancement, heuristic approach for video, 48
Image enhancement using 3 x 3 pixel neighborhood operator functions, real-time, 135
Image filtering and shading correction, real-time digital, 104
Image filters and a hybrid smoother, comparison of digital, 110
Image processing, applications of programmable logic arrays to video rate, 161
Image processing system, the LAE 980: a multipurpose digital, 146
Image reconstruction and to computer-generated holograms, iterative method applied to, 2
Image restoration using a norm of maximum information, 14
Images, adaptive hybrid coding of, 233
Images, automatic change detection for synthetic aperture radar, 125
Images, boundary-finding scheme and the problem of complex object localization in computed tomography, 213
Images, bounded-error coding of cosine transformed, 291
Images, dual-mode hybrid compressor for facsimile, 226
Images, global local edge coincidence segmentation for medical, 181
Images, median masking technique for the enhancement of digital, 142
Images with Poisson noise, nonlinear restoration of filtered, 84
Imaging techniques implemented on pipeline minis and an array processor with application to nerve fiber counting, 194
Implementation, fast median filter, 154
Information, image restoration using a norm of maximum, 14
Inspection algorithms using an array processor, speedup of radiographic, 96
Intraframe color video, Walsh-Hadamard transform/differential pulse code modulation (WHT/DPCM) processing of, 240
Iterative method applied to image reconstruction and to computer-generated holograms, 2

LAE 980: a multipurpose digital image processing system, the, 146
Linear regression formula for dimensionality reduction, 40
Local edge coincidence segmentation for medical images, global, 181
Localization in computed tomography images, boundary-finding scheme and the problem of complex object, 213
Logic arrays to video rate image processing, applications of programmable, 161

Masking technique for the enhancement of digital images, median, 142
Maximum information, image restoration using a norm of, 14
Measurement system, digital television parts, 167
Median filter implementation, fast, 154
Median masking technique for the enhancement of digital images, 142
Medical images, global local edge coincidence segmentation for, 181
Medicine, precision computer display techniques in nuclear, 176
Method applied to image reconstruction and to computer-generated holograms, iterative, 2
Minis and an array processor with application to nerve fiber counting, imaging techniques implemented on pipeline, 194
Modulation (PCM) image coding, reduction of quantization noise in pulse code, 314
Modulation (WHT/DPCM) processing of intraframe color video, Walsh-Hadamard transform/differential pulse code, 240
Motion prediction, conditional replenishment using, 268
Multiple window display techniques in computed tomography, 174
Multipurpose digital image processing system, the LAE 980: a, 146

NTSC color video signal, two-dimensional transforms of the sampled, 308
Neighborhood operator functions, real-time image enhancement using 3 x 3 pixel, 135
Nerve fiber counting, imaging techniques implemented on pipeline minis and an array processor with application to, 194
New technique for blind deconvolution, 119
Noise, nonlinear restoration of filtered images, with Poisson, 84
Noise in pulse code modulation (PCM) image coding, reduction of quantization, 314
Noiseless coding, practical universal, 247
Nonlinear restoration of filtered images with Poisson noise, 84
Norm of maximum information, image restoration, using a, 14
Nuclear medicine, precision computer display techniques in, 176

Object localization in computed tomography images, boundary-finding scheme and the problem of complex, 213
Observer performance, bandwidth compression: its effect on, 278
Operator functions, real-time image enhancement using 3 x 3 pixel neighborhood, 135
Optical methods of image differencing for track assembly, digital and, 66

(PCM) image coding, reduction of quantization noise in pulse code modulation, 314
Parallel-beam conversion in CAT by rubber sheet transformation, fan-to, 76
Parts measurement system, digital television, 167
Performance, bandwidth compression: its effect on observer, 278
Phase retrieval, wavefront sensing by, 32
Photographs, environmental change detection in digitally registered aerial, 26
Pipeline minis and an array processor with application to nerve fiber counting, imaging tecniques implemented on, 194
Poisson noise, nonlinear restoration of filtered images with, 84
Position uncertainty on computed tomographic (CT) scans, reduction of edge, 222
Practical universal noiseless coding, 247
Precision computer display techniques in nuclear medicine, 176
Prediction, conditional replenishment using motion, 268
Procedures for radiology, computer-controlled video subtraction, 203
Processing, applications of programmable logic arrays to video rate image, 161
Processing in computed radiography, applications of digital, 210
Processing of intraframe color video, Walsh-Hadamard transform/differential pulse code modulation (WHT/DPCM). 240
Processing system, the LAE 980: a multipurpose digital image, 146
Processor, speedup of radiographic inspection algorithms using an array, 96
Processor with application to nerve fiber counting, imaging techniques implemented on pipeline minis and an array, 194
Processor (VIDAP): a real-time video data compressor, video data, 284
Programmable logic arrays to video rate image processing, applications of, 161
Pulse code modulation (PCM) image coding, reduction of quantization noise in, 314
Pulse code modulation (WHT/DPCM) processing of intraframe color video, Walsh-Hadamard transform/differential, 240

Quantization noise in pulse code modulation (PCM) image coding, reduction of, 314

Radar images, automatic change detection for synthetic aperture, 125
Radiographic inspection algorithms using an array processor, speedup of, 96
Radiography, applications of digital processing in computed, 210
Radiology, computer-controlled video subtraction procedures for, 203
Rate image processing, applications of programmable logic arrays to video, 161
Real-time digital image filtering and shading correction, 104
Real-time image enhancement using 3 x 3 pixel neighborhood operator functions, 135
Real-time video data compressor, video data processor (VIDAP): a, 284
Reconstruction and to computer-generated holograms, iterative method applied to image, 2
Recording system, data handling, 130
Reduction of edge position uncertainty on computed tomographic (CT) scans, 222
Reduction, linear regression formula for dimensionality, 40
Reduction of quantization noise in pulse code modulation (PCM) image coding, 314
Regression formula for dimensionality reduction, linear, 40
Replenishment using motion prediction, conditional, 268
Restoration of filtered images with Poisson noise, nonlinear, 84
Restoration using a norm of maximum information, image, 14
Retrieval, wavefront sensing by phase, 32
Rubber sheet transformation, fan-to parallel-beam conversion in CAT by, 76

Sampled NTSC color video signal, two-dimensional transforms of the, 308
Scans, reduction of edge position uncertainty on computed tomographic (CT), 222
Segmentation for medical images, global local edge coincidence, 181
Semi-definite and definite decoders, image coders with, 299
Sensing by phase retrieval, wavefront, 32
Shading correction, real-time digital image filtering and, 104
Signal, two-dimensional transforms of the sampled NTSC color video, 308
Smoother, comparison of digital image filters and a hybrid, 110
Speedup of radiographic inspection algorithms using an array processor, 96
Subpixel accuracy, effect of image aliasing on image alignment to, 58
Subtraction procedures for radiology, computer-controlled video, 203
Synthetic aperture radar images, automatic change detection for, 125

Technique for blind deconvolution, new, 119
Techniques implemented on pipeline minis and an array processor with application to nerve fiber counting, imaging, 194
Television parts measurement system, digital, 167
3 x 3 pixel neighborhood operator functions, real-time enhancement using, 135
Tomographic (CT) scans, reduction of edge position uncertainty on computed, 222
Tomography images, boundary-finding scheme and the problem of complex object localization in computed, 213
Tomography, multiple window display techniques in computed, 174
Track assembly, digital and optical methods of image differencing for, 66
Transformation, fan-to parallel-beam conversion in CAT by rubber sheet, 76
Transform/differential pulse code modulation (WHT/DPCM) processing of intraframe color video, Walsh-Hadamard, 240
Transforms of the sampled NTSC color video signal, two-dimensional, 308
Two-dimensional transforms of the sampled NTSC color video signal, 308

Uncertainty on computed tomographic (CT) scans, reduction of edge position, 222
Universal noiseless coding, practical, 247

(VIDAP): a real-time video data compressor, video data processor, 284
Video data compressor, video data processor (VIDAP): a real-time, 284
Video data processor (VIDAP): a real-time video data compressor, 284
Video image enhancement, heuristic approach for, 48

Video rate image processing, applications of programmable logic arrays to, 161
Video signal, two-dimensional transforms of the sampled NTSC color, 308
Video subtraction procedures for radiology, computer-controlled, 203
Video, Walsh-Hadamard transform/differential pulse code modulation (WHT/DPCM) processing of intraframe color, 240
(WHT/DPCM) processing of intraframe color video, Walsh-Hadamard transform/differential pulse code modulation, 240
Walsh-Hadamard transform/differential pulse code modulation (WHT/DPCM) processing of intraframe color video, 240
Wavefront sensing by phase retrieval, 32
Window display techniques in computed tomography, multiple, 174
